

For those hungry for bottomless, rapturous bass, a complement of two **Bass Towers**, matched to the speaker model and finish selected, are irresistible. (Shown above on right with MR!777AT)

*From a Single Speaker to a Full Series...
from a Full Series to a Dynamic System*

The **M! Series** represents the culmination of decades of passionate, perfectionistic design and engineering from Peter Bichel Noerbaek (though you can be sure he will relentlessly pursue his vision as far as the technology will allow). The M! Series is more than a collection of speakers—it is a realization of Noerbaek’s full-system approach to high-end audio.

Each speaker he builds performs as part of an integrated system that includes pre-amps, amplifiers, speakers, and turntables. Each link in this chain is as strong and painstakingly tested as the others. The standard of performance is uncompromising—and the intuitive, finely attuned listening skills Noerbaek brings to his work give his systems an almost palpable sense of presence—of “*thereness*.”

PBN’s commanding **EBS-A3** amplifier is itself part of a series of masterfully engineered components. The copper coil alone weighs 70 pounds. This amp, when teamed with one of PBN’s Olympia pre-amps and DAC converters, lays a foundation that elevates the full system performance.

The drivers selected for PBN speakers are ultimately measured by one qualifier: How well do they harmonize to create the balanced, immersive sound that gives clean, pure, effortless “truth” to the music? Shown is part of the MR!777AT assembly: MF 2 x 12” mid-range and HF 1 x 6” Ribbon Driver.

GrooveMaster Vintage Direct P3 Professional

The **PBN P3** is one of ten GrooveMaster premier turntables. As with the rest of PBN’s growing family of hybrid turntables, the P3 restores and improves on the excellence of these era-defining players.

The original Pioneer 3 eclipsed its rivals in the rigorous testing undertaken by the Stereo Sound experts in 1980. It ultimately proved to be the most successful high-end turntable in Japan’s highly competitive electronics field.

With the precisely engineered EM-03 motor, Direct Drive Stable Hanging Rotor (SHR) system, and triple insulation, this marvel of classic turntable design is now given new life as part of the elite GrooveMaster Vintage Direct Professional series from PBN Audio.

M! Series

Immersive.
Magical.
“There.”

To hear is to believe.

Merging two PBN designs in one amazing hybrid, the **MR!777** combines the scale and formidable prowess of the Master Reference with the M! Series' uncanny balancing of peerless drivers.
26"W x 27.5"D x 81"H

The dynamic 18" woofer (2245H) is the foundation of the unique design of the **M3!5**, and is perfectly complemented by a 2206H midrange driver and SA8535 ribbon tweeter. At 345 lbs per speaker, it has the full power to own any room dedicated to a total audio experience.
21"W x 27"D x 54"H

The **MR!X** couples the incredibly precise, powerful 2360 Bi-Radial Horn with a highly-rated compression driver, complemented by a superb 18" woofer that provides weight and foundation. The sensitivity is an astonishingly high 98dB, @ one Watt @ one meter!
31"W x 35"D x 60"H

M! Series A Triumph of Technology ...Plus a Little Magic

PBN Astounds Critics with a Speaker Series That Captures the Essence of "Thereness"

The **M! Series** presents the newest and, some contend, the most lifelike and immersive speaker system they have experienced. They capture, through a deeply intuitive balancing of drivers, cabinet design, and electronics, the essence of "thereness" in ways that seem to break free from our expectations of audio systems.

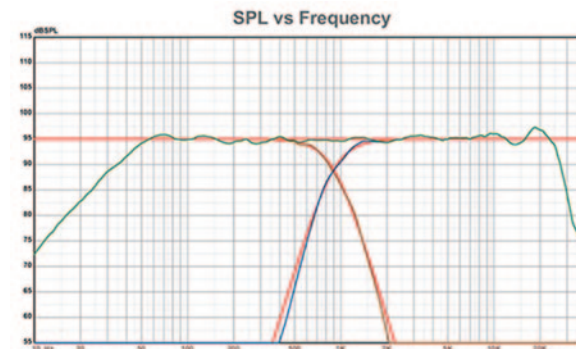

Following the introduction of the hugely successful **M2!5**, PBN developed a complete series of speakers incorporating the same innovative design and standards of excellence. The full 30-year-plus experience of Peter Noerbaek and PBN Audio is showcased in each model's breathtakingly authentic performance and spatial clarity. It has been described as possessing that seemingly magical capacity to evoke a visceral sense of presence that, even for some professional reviewers, can send a chill down the back.

We begin with the 44" tall **M0!5** with twin 8" woofers, designed for smaller venues or as surround speakers. Or, step up in scale and power with the **M1!5**, boasting 12" woofers. Next in line: the original **M2!5** sensation or its companion **M2!5s**, with dual classic 15" woofers wedded perfectly with a mid-range tweeter compression horn driver.

Consider the more robust **M3!5** with an 18" woofer, midrange driver, and a unique ribbon tweeter. Completing the line is the seven-foot Master Reference hybrid **MR!777** with two superlative 18" woofers—and most recently, the highly distinctive **MR!X** featuring an 18" woofer supporting a stunning bi-radial horn.

The **M! Series** – now with a full selection of models giving you a perfect choice for your listening environment. But don't trust our words. Trust the sound itself. If you're afforded an chance to audition an M! Series system, do not pass it up.

This graph maps the incredibly flat frequency response of the M2!5. All M! Series speakers yield similar profiles.

The twin 15" woofers of the **M2!5** feature low-loss magnetic structure and Symmetrical Field Geometry. The mid-range/tweeter compression driver, mounted on WaveGuide horns, aligns with the woofers "in time" via amazing 900 Hz crossovers. The clear result: "thereness."
18"W x 23"D x 53"H

The **M1!5**, featuring twin 12" woofers. The compression driver features the same phase plug that's used in the most refined drivers and is integrated masterfully, as in the **M2!5**, with its nearly peerless high-frequency soundscape.
14"W x 19"D x 42.5"H

The **M0!5** comes with twin advanced 8" woofers that provide outstanding drive force symmetry and stability. The ribbon tweeter, with a Neodymium magnet and 3-inch reinforced sandwich diaphragm, completes the balanced, subtly dimensional sound.
11"W x 16"D x 44"H
